Geo² named winners of prestigious industry award

A commitment to understanding individual customer needs and providing innovative solutions to their problems has led to West Yorkshire company Geo² Remediation winning a prestigious industry award.

The organisation beat off stiff competition to claim the APEA (Association of Petroleum Explosives Administration) Award for Small Enterprise at this month's annual awards ceremony

Geo² is a company which specialises in innovative, cost-effective solutions to contaminated soil and groundwater problems.

Its award success was based on how it demonstrated that it built strong client relationships and offered fixed price remediation which is highly unusual in the industry through innovative remediation methods.

Geo² Remediation Ltd's Director Paul Stapleton said: "We are delighted and proud to be recognised for our contribution within the petroleum sector which is focused on innovative, relevant and cost effective remediation solutions. We see this award as a justification in the way we operate and will continue to improve our service as a leading technology provider in the marketplace."

Based in Ferrybridge, Geo² Remediation Ltd works with a variety of clients and it's highly skilled staff team operate throughout the UK and Ireland.

The company has a comprehensive profile of chemical oxidation programmes which, when combined with other remediation technologies, have been successfully tailored to meet site specific requirements for contaminated land treatment.

The APEA Awards, now in their fourth year, are fast becoming recognised as an industry celebration of organisations and individuals who lead the way in demonstrating high standards in their fields.

Soil and groundwater contamination represents a serious threat to both public health and the wider environment. New legislation, increasing landfill costs and pressure for the redevelopment of brownfield sites means that solutions to these problems must be found.

A full range of remediation technologies, together with underground tank removal, demolition and validation, are offered by Geo² Remediation Ltd and allow the company to provide clients with a full site preparation service, supported by many years of experience in the environmental industry.

For more information about the company log on to www.geo2.co.uk or telephone 01977 674113 to find out how the company can help you.
